# STOP WASTING COLORADO EGGS

## Farmers Can Help By

1. PRODUCING ONLY INFERTILE EGGS FOR MARKET. Dispose of all males as soon as the hatching season is over.
2. Producing uniform eggs from one breed.
3. Providing clean nests and gathering eggs twice daily.
4. Keeping eggs in cool, dry, well-ventilated place free from odors.
5. Marketing good eggs at least twice each week during summer months.
6. Protecting eggs from hot sun on way to market.

**WHICH DOZEN  
WOULD YOU  
BUY?**

Standard-bred, uniform flocks will always produce uniform eggs like those above, but \_\_\_\_\_

Mongrel flocks will always produce a mixed lot of eggs as above which never bring top prices.

## Dealers Can Help By

1. Encouraging production of infertile eggs by paying more for them.
2. Candling every egg shipped or sold.
3. Packing eggs only in good cases, using new flats and fillers.
4. Placing excelsior pads on top and bottom of each case. DO NOT USE STRAW.
5. Keeping eggs in cool, dry place away from kerosene. Never allow a shipment to stand in the sun.
6. Shipping at least once every other day. Holding eggs in temperatures above 60 degrees causes rapid deterioration.

# Market All Colorado Eggs On A Quality Basis
